

Flex frame

Middle clamp

End clamp

Roof hook for different tile forms

Connection for special roof forms

Mounting rail

Adapter plate + Formlock screw

Assembly hook

Accessories

A concise range for all applications

Product Summary

Part	Part-No.
Solar Flex frame	194102
Roof hook fix-45	194072
Roof hook-set "Biberschwanz"	194089
"Kalzip"-Clamp	194058
Standing alu roof seam clip	194065
Bolt screw set for corrugated fibre-cement roofing	192557
Profiled sheeting holder Solar	194171
Channel 41/21/2,0 6m hdg	193860
Solar frame middle clamp	193303
Solar frame end clamp	193297
Assembly hook Solar	194096
Adapter plate Solar	194119
Formlock Screw F 80	192512
Hexagon wooden screw M10x100	153663
CC-Channel nut M10 hcp	186284
Fixing Bracket MW 90/90/30 hdg/hcp	194041
Universal Joint UG M10 ss	171695
Channel Connector SK 41/21	186680
Bolt Anchor BZ plus ss (A4)	194201

Sikla Solar Panel Support System – Project Applications

The Solar Panel Support System is used in numerous international projects. Higher profitability, simple and time-saving assembly, tested product quality, professional service and full compatibility with all other Sikla system products – that's the recipe for success of the Sikla Solar Panel Support Systems.

Solar Panel Support System

Cost-effective
and
Efficient ...

... for Solar Panel
installations

Assembly on flat roofs. The basis of the structure is a one-piece adjustable flex frame.

30° ground mounted structure using channel sections.

Assembly on sloping roofs. Fastening of substructure on roof hooks.

Simple and time-saving assembly

Sikla Solar Panel Support System

Innovative, economical, efficient

Sikla Solar – the innovative system for the cost-effective installation of photovoltaic solar panels. Modular and simple to use, it is suitable for all types of applications. Tested corrosion resistant components, statically calculated constructions, and individual service backed by the Sikla guarantee offer both installers and investors a reassuring level of security. Benefit from our 40 years' experience and capacity as a specialist in support and fastening solutions – adopting the Sikla Solar System will be a profitable move!

◆ Optimised for all types of applications

- field construction
- flat roof
- sloping roofs
- facades

◆ Maximum productivity

- time-saving installation process, few components
- simple handling, no loose parts
- convenient installation aids

◆ Outstanding cost/performance ratio

- long-lasting components
- guaranteed safety

◆ Flexible fastening system

- suitable for all current panels
- middle and end clamps adjustable for all current module thicknesses

◆ Long-lasting corrosion resistance

- tested HCP-surface
- no bi-metal corrosion

◆ Statically calculated constructions

- statically adjusted and tested components

◆ Compatible with Sikla system components

- flexibility to meet specific site installation assembly and load requirements

◆ Extensive services

- individual static calculations
- drafting of part lists
- on-site support

The end clamps are pre-installed by clicking in the channel opening and are tightened after vertical adjustment.

After aligning the braces on the end clamps the middle clamps and assembly hooks are inserted.

The panel to install is butted up to the end clamps and assembly hooks. The middle clamps are slid against the panel. The end clamps are then finally tightened.

The second panel is pushed towards the middle clamps and assembly hooks. The middle clamps are tightened, the next middle clamps are inserted, etc.

Benefit from these advantages!

- ◆ Middle and end clamps are equipped with the Pressix CC technology – no loose parts, simply push-in, tighten, that's it!
- ◆ Middle and end clamps suit all current panel sizes.
- ◆ The assembly hook replaces the second man on the site and retains the panel until final fixing.
- ◆ Easy positioning of the end clamps allows for precise panel alignment.
